Did you know that bobcats are only found in North America? This month, we are learning all about the Bobcat, *Lynx rufus*. Here are some fun and key facts:

- Bobcats have adapted to various environments, including swamps, deserts, high mountains, and suburban landscapes.
- Bobcats are polygamous, meaning they have more than one mate. They typically breed during winter and spring and have 2-4 kitten litters.
- Bobcats can live between 13 and 15 years in the wild, making their homes in fallen trees, boulder piles, and caves. They can even climb Saguaro Cacti!
